Brain And Spinal Tumors Of Childhood (Hodder Arnold Publication)
Synopsis

Children with brain and spinal tumors account for 20-25% of childhood cancers. Until the early 1990s there had been little progress in the development of new treatments, and outcomes were not improving despite advances seen in other childhood cancers. During the past 10 years, however, there has been a dramatic increase in interest in the subject among pediatric specialists worldwide, and new multi-disciplinary teams have become established. There are encouraging early signs of improvement in outcomes, and more are anticipated. The appearance of this comprehensive, but practical, evidence-based review of brain and spinal tumors in children is therefore very timely. The content includes detailed coverage of the diagnosis, clinical management, after care and monitoring, and underlying biology of brain and spinal tumors in children. International in approach, it draws on the experience of the European Childhood Brain Tumour Committee, linked to the International Society of Paediatric Oncology, and various multi-centre clinical trials to reflect the various approaches to management that have arisen around the world.

Book Information

Series: Hodder Arnold Publication
Paperback: 552 pages
Publisher: CRC Press; 1 edition (July 30, 2004)
Language: English
ISBN-10: 0340762608
Product Dimensions: 10.7 x 1.3 x 8.2 inches
Shipping Weight: 3.5 pounds (View shipping rates and policies)
